Dear friends

Osteoarthritis of the wrist has been less treated than for the other joints, such as the hip, knee or shoulder.

However, in recent years, many surgeons who have devoted most of their surgical practice to this joint, have made significant progress, which means that the arthrodesis of the wrist, long considered as the only alternative, is no longer a fatality. The Institut de la Main has decided to bring together these surgeons who will come to present us in a precise and playful way, the latest surgical techniques, arthroscopic and open.

Consensus Round Tables will attempt to elucidate a decisional algorithm.

We are therefore waiting for you to exchange many, because of your experience, together we will be able to progress.
